 ERRNO(3)**Linux Programmer's Manual****ERRNO(3)**

NAME [top](#)

`errno` - number of last error

SYNOPSIS [top](#)

```
#include <errno.h>
```

DESCRIPTION [top](#)

The `<errno.h>` header file defines the integer variable `errno`, which is set by system calls and some library functions in the event of an error to indicate what went wrong.

`errno`

The value in `errno` is significant only when the return value of the call indicated an error (i.e., -1 from most system calls; -1 or NULL from most library functions); a function that succeeds is allowed to change `errno`. The value of `errno` is never set to zero by any system call or library function.

For some system calls and library functions (e.g., `getpriority(2)`), -1 is a valid return on success. In such cases, a successful return can be distinguished from an error return by setting `errno` to zero before the call, and then, if the call returns a status that indicates that an error may have occurred, checking to see if `errno` has a nonzero value.

`errno` is defined by the ISO C standard to be a modifiable lvalue of type `int`, and must not be explicitly declared; `errno` may be a macro. `errno` is thread-local; setting it in one thread does not affect its value in any other thread.

Error numbers and names

Valid error numbers are all positive numbers. The `<errno.h>` header file defines symbolic names for each of the possible error

numbers that may appear in *errno*.

All the error names specified by POSIX.1 must have distinct values, with the exception of **EAGAIN** and **EWOULDBLOCK**, which may be the same. On Linux, these two have the same value on all architectures.

The error numbers that correspond to each symbolic name vary across UNIX systems, and even across different architectures on Linux. Therefore, numeric values are not included as part of the list of error names below. The [perror\(3\)](#) and [strerror\(3\)](#) functions can be used to convert these names to corresponding textual error messages.

On any particular Linux system, one can obtain a list of all symbolic error names and the corresponding error numbers using the **errno(1)** command (part of the *moreutils* package):

```
$ errno -l
EPERM 1 Operation not permitted
ENOENT 2 No such file or directory
ESRCH 3 No such process
EINTR 4 Interrupted system call
EIO 5 Input/output error
...
```

The **errno(1)** command can also be used to look up individual error numbers and names, and to search for errors using strings from the error description, as in the following examples:

```
$ errno 2
ENOENT 2 No such file or directory
$ errno ESRCH
ESRCH 3 No such process
$ errno -s permission
EACCES 13 Permission denied
```

List of error names

In the list of the symbolic error names below, various names are marked as follows:

- * *POSIX.1-2001*: The name is defined by POSIX.1-2001, and is defined in later POSIX.1 versions, unless otherwise indicated.
- * *POSIX.1-2008*: The name is defined in POSIX.1-2008, but was not present in earlier POSIX.1 standards.
- * *C99*: The name is defined by C99.

Below is a list of the symbolic error names that are defined on Linux:

E2BIG Argument list too long (POSIX.1-2001).

EACCES Permission denied (POSIX.1-2001).

EADDRINUSE

Address already in use (POSIX.1-2001).

EADDRNOTAVAIL

Address not available (POSIX.1-2001).

EAFNOSUPPORT

Address family not supported (POSIX.1-2001).

EAGAIN Resource temporarily unavailable (may be the same value as **EWOULDBLOCK**) (POSIX.1-2001).

EALREADY

Connection already in progress (POSIX.1-2001).

EBADE Invalid exchange.

EBADF Bad file descriptor (POSIX.1-2001).

EBADFD File descriptor in bad state.

EBADMSG

Bad message (POSIX.1-2001).

EBADR Invalid request descriptor.

EBADRQC

Invalid request code.

EBADSLT

Invalid slot.

EBUSY Device or resource busy (POSIX.1-2001).

ECANCELED

Operation canceled (POSIX.1-2001).

ECHILD No child processes (POSIX.1-2001).

ECHRNG Channel number out of range.

ECOMM Communication error on send.

ECONNABORTED

Connection aborted (POSIX.1-2001).

ECONNREFUSED

Connection refused (POSIX.1-2001).

ECONNRESET

Connection reset (POSIX.1-2001).

EDEADLK

Resource deadlock avoided (POSIX.1-2001).

EDEADLOCK

On most architectures, a synonym for **EDEADLK**. On some architectures (e.g., Linux MIPS, PowerPC, SPARC), it is a separate error code "File locking deadlock error".

EDESTADDRREQ

Destination address required (POSIX.1-2001).

EDOM Mathematics argument out of domain of function (POSIX.1, C99).

EDQUOT Disk quota exceeded (POSIX.1-2001).

EEXIST File exists (POSIX.1-2001).

EFAULT Bad address (POSIX.1-2001).

EFBIG File too large (POSIX.1-2001).

EHOSTDOWN

Host is down.

EHOSTUNREACH

Host is unreachable (POSIX.1-2001).

EHWPOISON

Memory page has hardware error.

EIDRM Identifier removed (POSIX.1-2001).

EILSEQ Invalid or incomplete multibyte or wide character (POSIX.1, C99).

The text shown here is the glibc error description; in POSIX.1, this error is described as "Illegal byte sequence".

EINPROGRESS

Operation in progress (POSIX.1-2001).

EINTR Interrupted function call (POSIX.1-2001); see [signal\(7\)](#).

EINVAL Invalid argument (POSIX.1-2001).

EIO Input/output error (POSIX.1-2001).

EISCONN

Socket is connected (POSIX.1-2001).

EISDIR Is a directory (POSIX.1-2001).

EISNAM Is a named type file.

EKEYEXPIRED

Key has expired.

EKEYREJECTED

Key was rejected by service.

EKEYREVOKED

Key has been revoked.

EL2HLT Level 2 halted.

EL2NSYNC

Level 2 not synchronized.

EL3HLT Level 3 halted.

EL3RST Level 3 reset.

ELIBACC

Cannot access a needed shared library.

ELIBBAD

Accessing a corrupted shared library.

ELIBMAX

Attempting to link in too many shared libraries.

ELIBSCN

.lib section in a.out corrupted

ELIBEXEC

Cannot exec a shared library directly.

ELNRANGE

Link number out of range.

ELOOP Too many levels of symbolic links (POSIX.1-2001).

EMEDIUMTYPE

Wrong medium type.

EMFILE Too many open files (POSIX.1-2001). Commonly caused by exceeding the **RLIMIT_NOFILE** resource limit described in [getrlimit\(2\)](#). Can also be caused by exceeding the limit

specified in [/proc/sys/fs/nr_open](#).

EMLINK Too many links (POSIX.1-2001).

EMSGSIZE

Message too long (POSIX.1-2001).

EMULTIHOP

Multihop attempted (POSIX.1-2001).

ENAMETOOLONG

Filename too long (POSIX.1-2001).

ENETDOWN

Network is down (POSIX.1-2001).

ENETRESET

Connection aborted by network (POSIX.1-2001).

ENETUNREACH

Network unreachable (POSIX.1-2001).

ENFILE Too many open files in system (POSIX.1-2001). On Linux, this is probably a result of encountering the [/proc/sys/fs/file-max](#) limit (see [proc\(5\)](#)).

ENOANO No anode.

ENOBUFS

No buffer space available (POSIX.1 (XSI STREAMS option)).

ENODATA

The named attribute does not exist, or the process has no access to this attribute; see [xattr\(7\)](#).

In POSIX.1-2001 (XSI STREAMS option), this error was described as "No message is available on the STREAM head read queue".

ENODEV No such device (POSIX.1-2001).

ENOENT No such file or directory (POSIX.1-2001).

Typically, this error results when a specified pathname does not exist, or one of the components in the directory prefix of a pathname does not exist, or the specified pathname is a dangling symbolic link.

ENOEXEC

Exec format error (POSIX.1-2001).

ENOKEY Required key not available.

ENOLCK No locks available (POSIX.1-2001).

ENOLINK

Link has been severed (POSIX.1-2001).

ENOMEDIUM

No medium found.

ENOMEM Not enough space/cannot allocate memory (POSIX.1-2001).

ENOMSG No message of the desired type (POSIX.1-2001).

ENONET Machine is not on the network.

ENOPKG Package not installed.

ENOPROTOPT

Protocol not available (POSIX.1-2001).

ENOSPC No space left on device (POSIX.1-2001).

ENOSR No STREAM resources (POSIX.1 (XSI STREAMS option)).

ENOSTR Not a STREAM (POSIX.1 (XSI STREAMS option)).

ENOSYS Function not implemented (POSIX.1-2001).

ENOTBLK

Block device required.

ENOTCONN

The socket is not connected (POSIX.1-2001).

ENOTDIR

Not a directory (POSIX.1-2001).

ENOTEMPTY

Directory not empty (POSIX.1-2001).

ENOTRECOVERABLE

State not recoverable (POSIX.1-2008).

ENOTSOCK

Not a socket (POSIX.1-2001).

ENOTSUP

Operation not supported (POSIX.1-2001).

ENOTTY Inappropriate I/O control operation (POSIX.1-2001).

ENOTUNIQ

Name not unique on network.

ENXIO No such device or address (POSIX.1-2001).

EOPNOTSUPP

Operation not supported on socket (POSIX.1-2001).

(**ENOTSUP** and **EOPNOTSUPP** have the same value on Linux, but according to POSIX.1 these error values should be distinct.)

EOVERFLOW

Value too large to be stored in data type (POSIX.1-2001).

EOWNERDEAD

Owner died (POSIX.1-2008).

EPERM Operation not permitted (POSIX.1-2001).

EPFNOSUPPORT

Protocol family not supported.

EPIPE Broken pipe (POSIX.1-2001).

EPROTO Protocol error (POSIX.1-2001).

EPROTONOSUPPORT

Protocol not supported (POSIX.1-2001).

EPROTOTYPE

Protocol wrong type for socket (POSIX.1-2001).

ERANGE Result too large (POSIX.1, C99).

EREMCHG

Remote address changed.

EREMOTE

Object is remote.

EREMOTEIO

Remote I/O error.

ERESTART

Interrupted system call should be restarted.

ERFKILL

Operation not possible due to RF-kill.

EROFS Read-only filesystem (POSIX.1-2001).

ESHUTDOWN

Cannot send after transport endpoint shutdown.

ESPIPE Invalid seek (POSIX.1-2001).

ESOCKTNOSUPPORT

Socket type not supported.

ESRCH No such process (POSIX.1-2001).

ESTALE Stale file handle (POSIX.1-2001).

This error can occur for NFS and for other filesystems.

ESTRPIPE

Streams pipe error.

ETIME Timer expired (POSIX.1 (XSI STREAMS option)).

(POSIX.1 says "STREAM `ioctl(2)` timeout".)

ETIMEDOUT

Connection timed out (POSIX.1-2001).

ETOOMANYREFS

Too many references: cannot splice.

ETXTBSY

Text file busy (POSIX.1-2001).

EUCLEAN

Structure needs cleaning.

EUNATCH

Protocol driver not attached.

EUSERS Too many users.

EWouldBlock

Operation would block (may be same value as **EAGAIN**) (POSIX.1-2001).

EXDEV Improper link (POSIX.1-2001).

EXFULL Exchange full.

NOTES

[top](#)

A common mistake is to do

```
if (somecall() == -1) {  
    printf("somecall() failed\n");  
}
```
